

A Non-Toxic Approach to Pest Management

Snap Traps

- Identify rodent pathways and place traps accordingly
- Common attractants include peanut butter and chocolate spread
- When children and pets are present, place snap traps in tamper-resistant bait stations

Rodent pheromones left in or around a trap will help attract other rodents to the trap

Mechanical Traps

- Identify active runways and place mechanical traps in dark areas, along walls and behind objects
- Ideal placements in commercial facilities are along both sides of interior and exterior doorways
- For fast and easy servicing, use a glue board in conjunction with a mechanical trap
